Staying Covid-19 safe in 2021

Updated 5th January 2021

Following 2021 government guidelines on 'Working in Other People's Homes' we are continuing to work on projects in our workshop and complete installations in our client's homes throughout Surrey and Hampshire.

With a little extra care we can all stay safe

The safety and well-being of our staff and clients is our priority, and we have had to adapt in response to Covid-19. We have made changes to the way we work throughout our business, and all our staff are using new working practices, to keep themselves and others safe.

Our Risk Assessments are regularly reviewed and updated to ensure compliance with the latest Government instructions for 'Working Safely during Covid-19'. We continue to social distance and maintain proper hygiene routines when we are working in your home.

Health Screening

We issue clear instructions to all our staff not to visit clients or attend work if they become ill or have any Covid-19 symptoms. If they or any member of their household have or are suspected of having Covid-19, they are required to stay at home and follow medical and government instructions on self-isolating.

We would ask you to do the same and not to go ahead with a design visit or installation if you or any member of your household has symptoms.
